

A 20x20 grid of small square patches, each representing a handwritten digit from the MNIST dataset. The patches are arranged in a grid where the rows and columns correspond to different digits. The color of each patch indicates its intensity, with a color bar on the right side of the image showing a gradient from dark blue (low intensity) to dark red (high intensity). The digits are clearly visible, with some patches showing high contrast (red) and others showing low contrast (blue). The overall pattern shows a mix of digits, with some rows and columns having more similar digits than others.
